No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                       782

Sequence 2101, Application US/09134001C

Sequence 2101, Application US/09134001C

GENERAL No. 6380370

APPLICANT: Lynn Doucette-Stamm et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS

TITLE OF INVENTION: EPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: GTC-007

CURRENT APPLICATION NUMBER: US/09/134,001C

CURRENT FILING DATE: 1998-08-13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             104 IleThrValAsp----LysPheGlyLeuIleTyrPheValAspGlyThrMetIleArgArg 122

/clone_norman Brain Amages state fractionated on a 1% agarose
gel.Rirst strand cDNA was size fractionated on a 1% agarose
gel.Rirst strand cDNA was size fractionated on a 1% agarose
gel.Rirst strand cDNA was size fraction, ligated with
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated with
EcoR I adaptor, digested with NotI and then cloned
directionally into pXX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is CGAACTGAAT. This library was created for the University
Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,
program coordinator."

/clone="Organ: Brain; Vector: pXX-Asc; Site_1: EcoR I;
Site_2: Not I: The library was constructed according
Bonaldo, Lemnon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel: First strand cDNA synthesis was primed with oligo-dT
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with Bcok I adaptor, digested with Not! and then cloned
directionally into pXX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is TGAGAGAGC: This library was created for the University
lows Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,
program Coordinator
Tissue Procurement: Dr. Jim Lin, University of Iowa CDNA Library preparation: Dr. M. Bento Soares, University of Iowa CDNA Library Arrayed by: Dr. M. Bento Soares, University of Iowa DNA Sequencing by: Dr. M. Bento Soares, University of Iowa Clone Distribution: MGC clone distribution information can be found through the I.M.A.G.E. | Journal of the property of the property of a comparise of a comparise of a comparise of a comparise of a comparing the first stranded from I million independent clones. CDNA synthesis was initiated using an oligo(dT) primer, using methylated of in the first strand synthesis was initiated using an oligo(dT) primer, using methylated of in the first strand synthesis reaction. Following this first strand reaction, double-stranded CDNA was blunted, ligated to NotI adapters, digested with ECORI size-selected, and cloned into the NotI and ECORI compatible sites of a custom modified MCS of the pluescript (KS+) vector. The library was normalized in 2 rounds using conditions adapted from Soarse et al., pNAS (1994) 91: 9228-9232 and Bonaldo et al., Genome Research freamnealing hybridization was used."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              셤
primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with ECOR I adaptor, digested with NotI and then cloned directionally into pYX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is CGAACTGAAT. This library was created for the University lowa Brain Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        EST 12-SEP-2003

//dev stage="1", 5, and 15 days newborn"
//lab host="hlub (TI phage resistant)"
//clone lib="hluh (HENAP GHO"
//clone lib="lut (HENAP GHO"
//note="Organ: Brain; Vector: pXx- Asc; Site 1: EcoR I;
Site 2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel. First strand cDNA synthesis was primed with oligo-dr
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with Not! and then cloned
directionally into pXx-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is CGAACTCAAT. This library was created for the University
lows Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,
program coordinator."

Denatured RNA was size fractionated on a 1% agarcse gel. First strand cDNA synthesis was primed with oligo-dT primer containing a Not I site .Double strand cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with NotI and then cloned directionally into PXX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is AgocaGACAG. This library was created for the University Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,

The present invention relates to new NOVX polypeptides. The invention is useful for treating or preventing a NOVX-associated disorder such as cardiomyopathy or atherosclerosis, where the disorder is related to cell signal processing and metabolic pathway modulation in a subject, by referably human. The invention is also useful for treating metabolic disorders (e.g. obesity), diabetes, infectious disease, neurodegenerative disorders (e.g. Alzheimer's disease, parkinson's disease, neurodegenerative disorders, haematopoietic disorders and various cancers. The molecules of the invention are also useful for treating or preventing cirrhosis, the invention are also useful for treating or preventing cirrhosis, compared tits, learning and memory defects, infertility, congenital heart defects, acne, hair growth, pigmentation disorders, endocrine disorders, respiratory disease, gastro-intestinal diseases, reproductive, health, congration, mention, mention, endocrine diseases, allergy and inflammation, nephrological disorders, urinary system callergy and inflammation, nephrological disorders, urinary system disorders, neuropsychiatric disorders and age-related disorders. The present nucleic acid sequence represents a NOVX gene. This sequence concess a NOVX protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Liu X;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel isolated NOVX polypeptide useful for treating cardiomyopathy, atherosclerosis, metabolic disorders, diabetes, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease or

The present sequence is a coding sequence for a NOV protein. The NOV proteins and coding sequences are useful for treating or preventing NOV-associated disorders or in the manufacture of a medicament for treating the disorders, such as cancer, heart disease, inflammation, autoimmune disorders, allergies, blood disorders, AIDS, diabetes, obesity, asthma, plan nephropathy, cirthosis, arthritis, Alzheimer's diseases, infections (e.g. bacterial, viral, parasitic), stroke, muscular dystrophy, epilepsy, and other wasting disorders associated with chronic diseases. NOVI is a TEN-M4 like protein and the NOVI gene is localised to chromosome 11
                                                                                                                                                                                      preventing or

WPI; 2002-723356/78. P-PSDB; ABG97359 New human proteins associated with cell growth, differentiation and death, useful for diagnosing, treating or preventing autoimmune or inflammatory disorders (e.g. AIDS, allergy or anemia), cancer, atherosclerosis or hepatitis.

Claim 5; Page 175-178; 181pp; English.

The invention relates to an isolated polypeptide comprising GGDD1-12 caid sequence at least 90% identical to GGDD, a biologically active acid sequence at least 90% identical to GGDD, a biologically active C acid sequence at least 90% identical to GGDD, a biologically active C fragment or an immunogenic fragment. Also included are the CGDD comprising a promoter sequence operably linked to the GGDD oblymucleotides, a cell transformed with the recombinant polymucleotide, a transgenic organism comprising the recombinant polymucleotide, an anti-off, screening for compounds which bind to/modulate or are antibody, screening for compounds which bind to/modulate or are antibody, screening for compounds which bind to/modulate or are cGDD polymucleotide microarray. The polypeptides, polymucleotides, and artagonists are useful for diagnosing treating or cGDD polymuclative (e.g. arteriosclerosis, atherosclerosis, agonists and artagonists are useful for diagnosing treating or preventing disorders associated with aberrant expression of GGDD, particularly cell proliferative (e.g. arteriosclerosis, atherosclerosis, particularly cell proliferative (e.g. arteriosclerosis, and of GGD, particularly cell proliferative (e.g. arteriosclerosis, and of GGD, particularly cell proliferative (e.g. arteriosclerosis, and of GGD, particularly cell proliferative (e.g. arteriosclerosis, and of GGD, particularly cell proliferative (e.g. arteriosclerosis, and of GGD, particularly cell proliferative (e.g. arteriosclerosis, and of GGD, particularly cell proliferative (e.g. arteriosclerosis, and of GGD, particularly cell proliferative (e.g. arteriosclerosis, and of GGD, ceptiles), reproductive disorders (e.g. arteriosclerosis, and of GGD, ceptiles), reproductive disorders (e.g. arteriosclerosis, and of GGD, ceptilitis, contact demantitis, crohact demantitis, contact demantitis, contact demantitis, pour, irritable bowel syndrome, multiple sclerosis, glomerulonephritis, qout, irritable bowel syndrome, autoimmune contact demantitis, proteorosis, parase

The present invention describes nove, indicate the result invention describes nove, indicate the care interest interest interest interest in invention describes nove the result interest in anticidabetic, anticidament, cerebroprotective, nontrathritic, virucide, immunosuppressive, anticlalergic, anticidaterial, fungicide, protozoacide and anticlalergic, anticidaterial, fungicide, protozoacide and anticlalergic, anticidate can be used in gene therapy. The NOVX proteins, nucleotides or antibodies can be used in the manufacture of a medicament for treating a syndrome associated with a human disease selected from NOVX-associated disorder, such as cancers (e.g. leukaemia, lymphoma, melanoma or cancer of the liver, lung, muscle, ovary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, ischaemic cerebrovascular disease, Alzhelmer's disease or Pick's ischaemic cerebrovascular transport (e.g. cystic fibrosis, disease), disorders (e.g. ulcerative colitie), or gastrointestinal disorders (e.g. ulcerative colitie), or gastrointestinal disorders (e.g. ulcerative colities, or gastrointestinal disorders (e.g. ulcerative colities), viral, bacterial fungal, helminthic and protozoal infections. The NOVX proteins can be used as immunogens to produce antibodies and as vaccines. The NOVX nucleotide sequences may be biological samples (tissue typing), and in forensic identification of a biological sample. The present sequence encodes human NOVISC, which is
The present invention describes novel human proteins designated NOVX,

The present invention describes novel human proteins designated NOVX, where X is 1 to 20 e.g. NOV1. NOVX sequences can have neuroprotective, cyfostatic, anticonvulsant, cerebroprotective, nootropic, cardiovascular, antidiabetic, anticonvulsant, cerebroprotective, notropic, cardiovascular, cantidiabetic, antianflammatory, antinheamatic, antiarthritic, virucide, immunosuppressive, antiallergic, antianematic, antiarthritic, virucide, immunosuppressive, antiallergic, antianematic, antiarthritic, virucide, corporaced conditions and antihelminhic activities, and can be used in gene therapy. The NOVX proteins, nucleotides or antibodies can be used in the manufacture of a medicament for treating a syndrome associated with a converse selected from NOVX-associated disorder, such as cancers (e.g. leukaemia, lymphoma, melanoma or cancer of the liver, lung, muscle, ovary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, cischaemic cerebrovascular disease, Alzheimer's disease or pick's disease), disorders of vesicular transport (e.g. cystic fibrosis, cischaemia, or intermatoid arthritis), viral, bacterial, fungal, helminthic and protozoal linfections. The NOVX proteins can be used as immunogens to produce antibodies and as vaccines 'neukaenia' cusequences may be produce antibodies and as vaccines. The NOVX nucleotide sequences may be biological samples (tissue typing), and in foorential eremic entering can entered contactions and and infortations from minute.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New NOVX polypeptides and polynucleotides useful for treating NOVX-associated disorders, such as cancers, neurological disorders, disorders of vesicular transport, gastrointestinal disorders, and autoimmune
                                                                                                                                                                                                                                                                                                                                                                                                       Shenoy S;

The present invention describes novel human proteins designated NOVX, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, cytostatic, anticonvulsant, cerebroprotective, nootropic, cardiovascular, antidiabetic, antidiabetic, antidiabetic, antidiabetic, antidiabetic, antidiabetic, antidiabetic, antidiabetic, antidiabetic, antidiabetic, includies, antidiabetic, antidiabetic, antidiabetic, includies, and can be used in gene protozoacide and antibhelminthic activities, and can be used in gene therapy. The NOVX proteins, nucleotides or antibodies can be used in the manufacture of a medicament for treating a syndrome associated with a manufacture of a medicament for treating a syndrome associated with a carport, testis and uterus, neurological disorders (e.g. leukaemia, lymphoma, melanoma or cancer of the liver, lung, muscle, ovary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, discase), disorders of vesicular transport (e.g. cystic fibrosis, disorders en litus, Grave's disease, Alzheimer's disperse or pick's disorders (e.g. ulcerative colltis, or gastric and duodenal disorders), cancemia, or rheumatoid artritis), viral, bacterial, fungal, helminthic and protozoal infections. The NOVX proteins can be used as immunogens to conduce antibodies and as vaccines. The NOVX nucleotide sequences may be biological samples (tissue typing), and in forense entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering entering
